

Greater Edwards Aquifer Alliance (GEAA)

## Community Rain Garden Project Application

There are many great reasons to build Rain Gardens: clean up stormwater before it enters San Antonio's primary drinking-water supply, the Edwards Aquifer, reduce flood damage, attract native butterflies, provide an outdoor lab for youth, etc. While GEAA is able to lead the design and construction of the garden—as well as assist in networking with outside volunteers, a key criteria for site selection will be the enthusiasm for the project demonstrated by the requesting community itself. We suggest you assemble a core group of supporters and hold a community meeting to solidify support.
