

Dear GEAA members and friends,

I just wanted to share this great news report from WOAI TV. I am so glad that the Edwards Aquifer Authority is conducting these studies and is making people aware as to just how vulnerable the Edwards is to contamination.

**Scientists Study How Contamination Travels in the Edwards Aquifer**

The Edwards Aquifer is the sole source of drinking water for more than two million residents. That's why it's important for scientists to understand how contamination travels in this karst aquifer. This [report from WOAI TV news](#) explains some shocking results of dye tracing studies conducted by the Edwards Aquifer Authority.

Have a great weekend!
