Honorable Chairman Pickett and Members of the House Environmental Regulations
Committee,

On behalf of the fifty-two member groups of the Greater Edwards Aquifer Alliance, I
present these comments in support of H.B. 3036, authored by Tracy O. King. This bill
specifically addresses concerns of those charged with protecting our drinking water
by prohibiting the discharge of sewage effluent into waterways that recharge the
Edwards Aquifer.

During the past several years I have had to learn way more about sewage than I ever
wanted to know. Still, I am not an expert on this topic. I rely on the testimony of
experts such as John Dupnik, who is here testifying before you today.

I stress that passage of this bill will not prohibit development within the region. Of all
the development that has been built within the region, only two have applied for
permits to discharge effluent directly into streams that recharge the Edwards Aquifer.

In Hays County, the *Belterra* subdivision's application to discharge wastewater into
Bear Creek was opposed by the Barton Springs Edwards Aquifer Conservation
District, by Hays and Travis counties, and by 95% of the municipalities within that
District. *Belterra's* permit was recently granted. In their ruling, TCEQ Commissioners
cited their reluctance to effect a rule change that should, in their opinion, be a taken
up by the State Legislature.

In 2008, *The Hills of Castle Rock* in Medina County applied for a permit to discharge
wastewater into the San Geronimo Creek. This application was being contested by
San Antonio Water Systems and the San Geronimo Valley Alliance on the basis that
it would harm the quality of the water of the Edwards Aquifer. Additionally, both the
SAWS Board of Directors and the City of San Antonio cited concerns about Hills of
Castle Rocks plans to discharge into the San Geronimo as among their reasons for
denying water service to this subdivision.

The more common practice, recommended by experts in this field, is that of applying
the treated effluent to land. Treated effluent could also be used to advantage by
installation of gray water systems for non-potable use such as watering lawns. We
realize that our region is growing, and that there will be additional development within
these environmentally sensitive areas. We are asking you to ensure that new

development does not compromise or degrade the quality of water in the Edwards Aquifer by voting in support of H.B. 3036.

Thank you for hearing testimony on this bill today. Please rely on GEAA as a resource regarding this and other bills related to protection of the Edwards Aquifer.

Respectfully,

Annalisa Peace
Executive Director
